

Introduction

 Our goal is to inject the fine-grained topical preference of users to the language generation model

Our Framework

Changing the Mind of Transformers for Topically-Controllable Language Generation

Haw-Shiuan Chang, Jiaming Yuan, Mohit lyyer and Andrew McCallum

Our Method

Model Architecture (Testing)

Option Generator

- Predict the topic embedding in a GloVe space
- Use 3 words closet to each topic embedding to visualize the topic

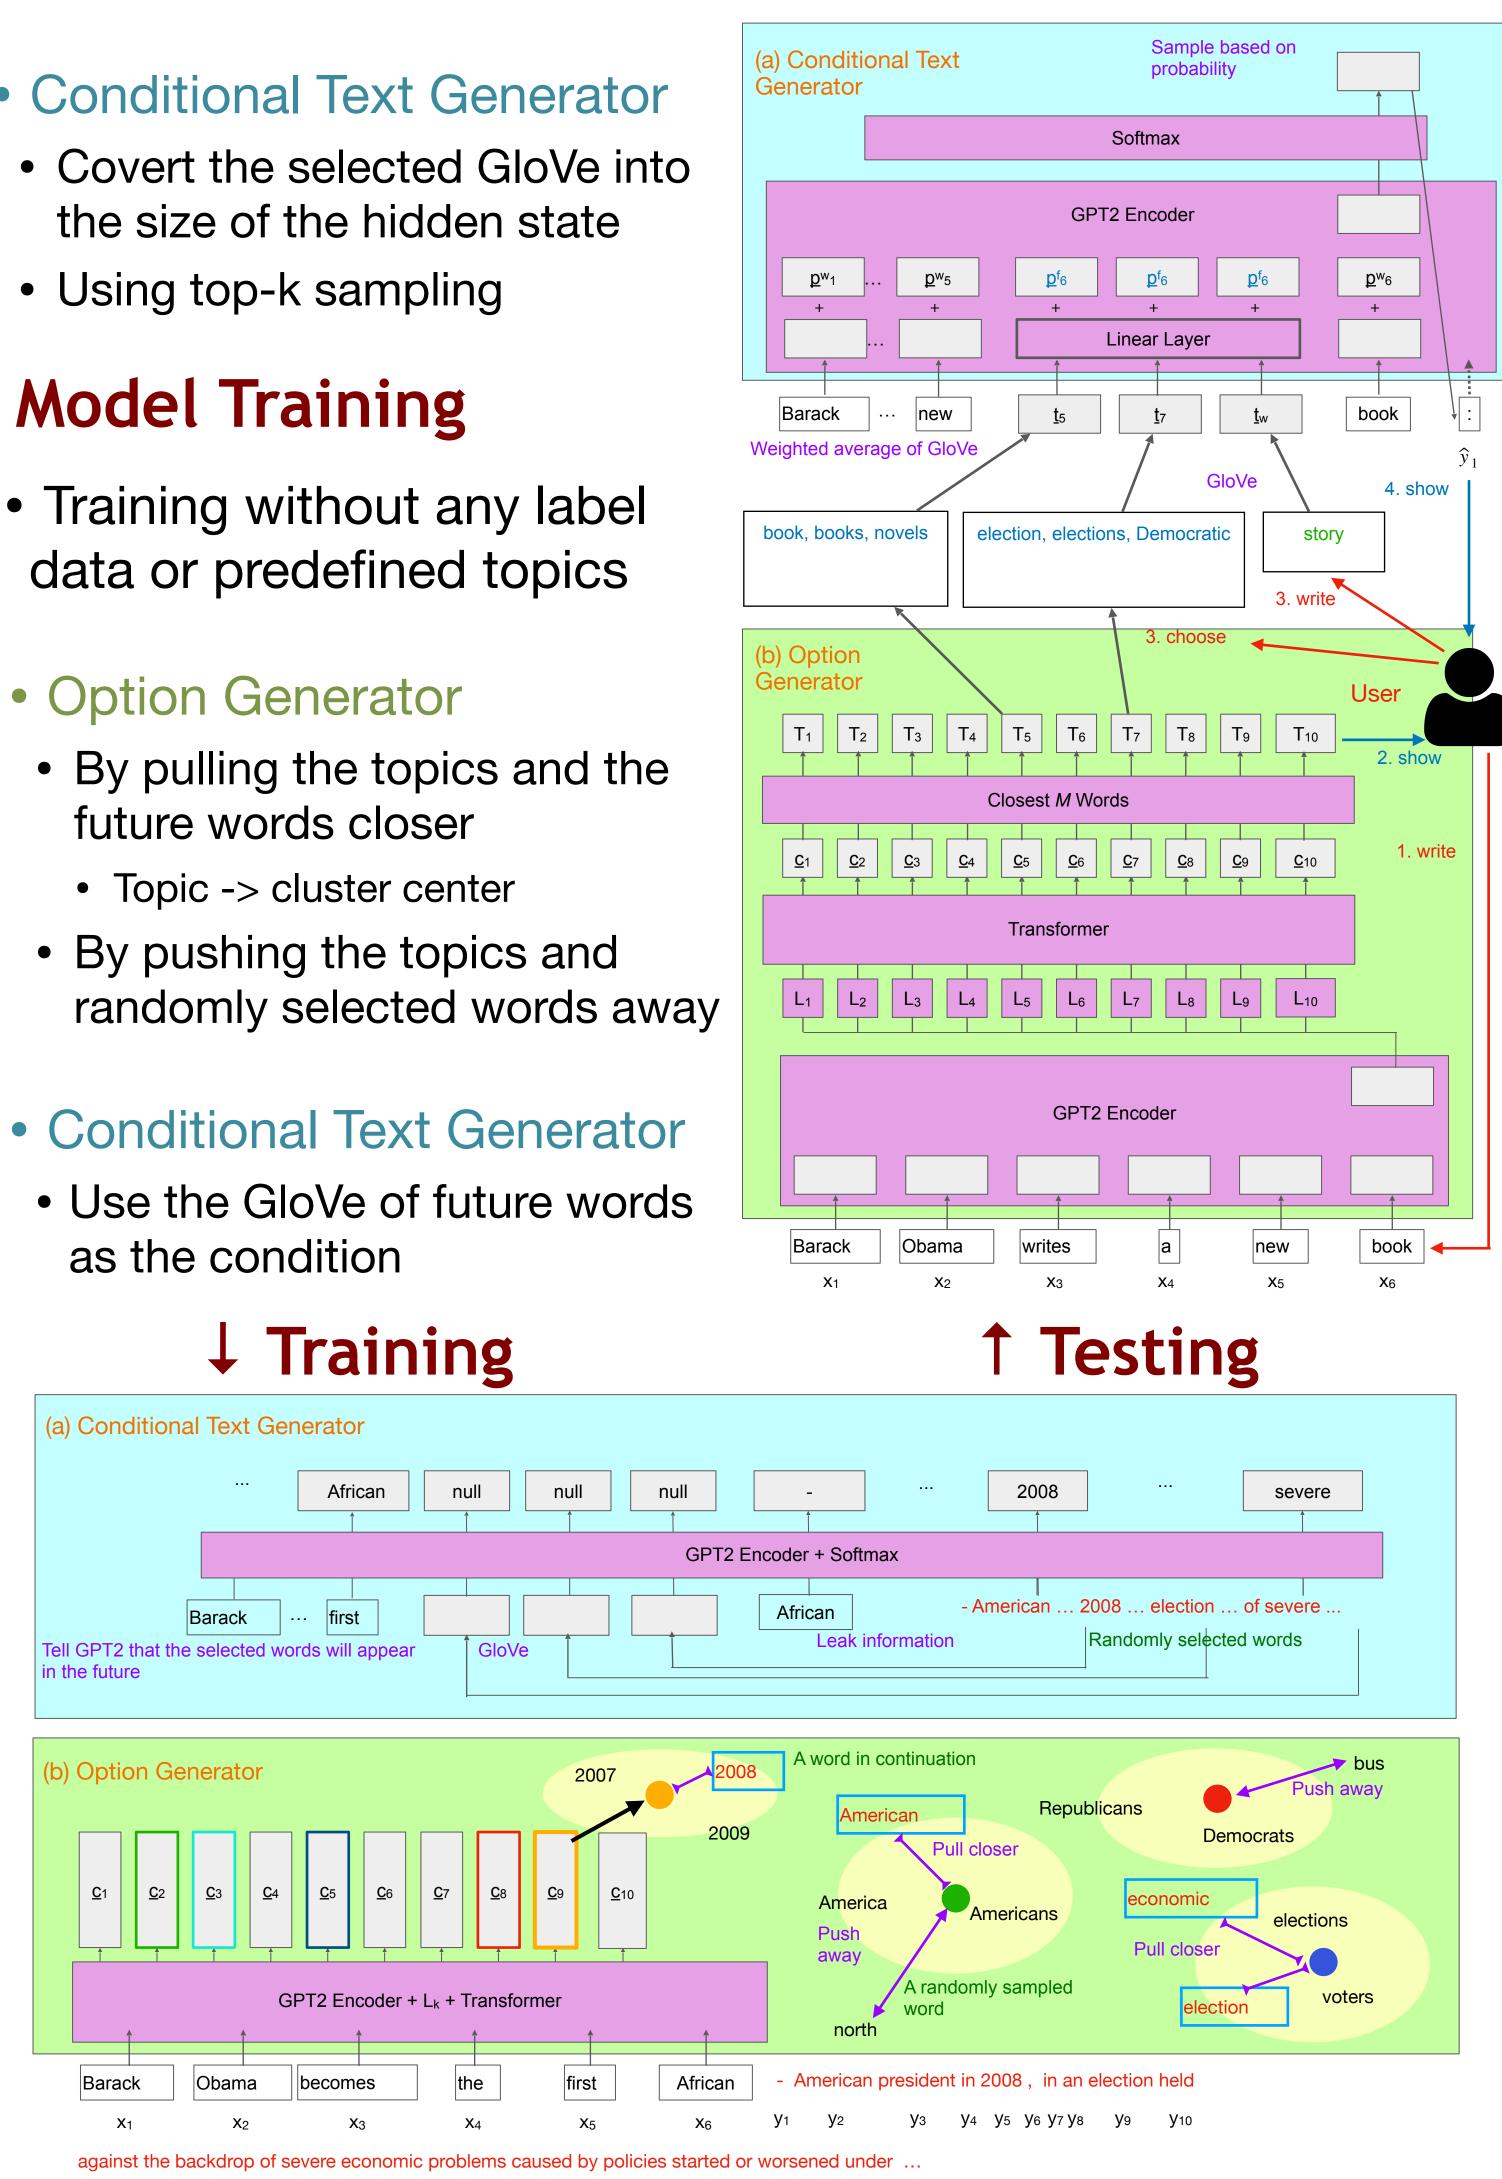

Conditional Text Generator

- the size of the hidden state

• Training without any label data or predefined topics

- future words closer
- By pushing the topics and

as the condition

Generated Text

of the Norwegian police has confirmed the cancer case. The law in Norway was the subject of the **Not relevant** cancer nearly tripled in Norway and Sweden since the 1950s. As well, skin **Redundant** study, a study was conducted conducted in Italy and in Finland. From the 1990s to the 1970s, there udy also revealed that only 20% of the deaths in Norway were caused by a sudden cardiac response nt studies have shown that melanin causes a decrease in genetic susceptibility in people in Norway,

Option Generator Evaluation

Conclusion

Decompose a novel framework into two novel components Option Generator -> topics are relevant but novel Conditional Text Generator -> Text is fluent and relevant Codes are available at <u>https://github.com/iesl/interactive_LM</u>
